#### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current **SMALL ENTITY status:** 

A. If the status is the same, pay the TOTAL FEE(S) DUE shown

B. If the status above is to be removed, check box 5b on Part B -Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

# **Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)**

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 345 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 345 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

#### **ALLOWANCE**

### Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey McIntyre on September 30, 2009.

The application has been amended as follows:

Claim 1: In line 5 change "0.50≤Mn\*S≤0.8" to "0.40≤Mn\*S≤1.2".

Claim 2: In line 5 change "0.50≤Mn\*S≤0.8" to "0.40≤Mn\*S≤1.2".

#### Reasons For Allowance

The following is an examiner's statement of reasons for allowance: while the closest prior art of JP 2003-253390 and JP 2001-207240 both teach a steel with a composition that overlaps with the steel of the instant invention, neither prior art reference teaches the relationship 0.40≤Mn\*S≤1.2 or Mn/S≥3.0. When weighing the evidence of non-obviousness, the instant specification and the 132 Declaration submitted September 30, 2009 provide data showing the criticality of the minimum and maximum values of both formulas. For example, Comparative Sample 13 in Table 2 using Steel No. 5 in Table 1 of the instant specification, which has a value of Mn/S of 2.8889 which is just below the claimed minimum value of Mn/S suffered cracking during rolling and could not be formed into a steel wire rod as recited in [0082] of the instant

specification. In addition, Comparative Sample 1 in Table 2 using Steel No. 1 in Table 1 of the instant specification, which has a Mn\*S value of 0.396 which is just below the claimed minimum value of Mn\*S has a finished surface roughness of 37.5 µm and shows machinability markedly inferior to the inventive samples as recited in [0082] of the instant specification. Furthermore, [0081] of the instant specification recites that the inventive steels have a desired finished surface roughness of 33.6 µm or less. Therefore, the resulting finished surface roughness at a Mn\*S value of 0.396 is well outside the desired range of finished surface roughness values. Lastly, Comparative Sample 19 in Table 2 using Steel No. 11 in Table 1 of the instant specification, which has a Mn\*S value of 1.232 which is just above the claimed maximum value of Mn\*S has a finished surface roughness value of 47.0 µm which is also well outside the desired range of finished surface roughness values of the inventive steel. In addition, the 132 Declaration submitted September 30, 2009 clarifies that the low Of/S value in Steel No. 11 should not be considered responsible for the poor characteristics of the product in example 11, but rather the high Mn\*S value led to a reduction in free oxygen necessary for the control of the configuration of Mn\*S, which deteriorated machinability and led to poor product characteristics. Therefore, the instant invention is patentably distinct from the prior art because Applicants have established that a low-carbon resulfurized free machining steel product with a composition within the claimed ranges and a composition that satisfies the recited formulas has improved machinability and a superior finished surface roughness.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
